TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks & Libraries: React, Redux, Node.js, Flask, Express, TensorFlow, Keras

Tools & Platforms: Git, Docker, AWS, PostgreSQL, Heroku, GitHub, Figma

EXPERIENCE

Frontend Developer

March 2022 – May 2023

CODAZEN / Contingent Worker for Meta

Irvine, CA

- Built and shipped React features primarily for the Meta Quest and Meta Portal product pages on meta.com, as well as promotional and event pages covering holiday campaigns, game releases, and policy updates, all reaching millions of monthly visitors.
- Rebuilt entire marketing pages from the ground up during the Facebook-to-Meta rebrand, assembling updated layouts from existing React components while swapping logos, color schemes, and product imagery to match the new Meta design system across multiple high-traffic pages.
- Translated Figma specs into pixel-accurate React components using Meta's internal component library, cutting design-to-development handoff time by approximately 25%.
- Instrumented customer data collection using Tealium across company projects, including an internal full-stack generative color palette tool built with REST API calls against a backend color database and frontend pages implemented directly from Figma designs.
- Wrote internal documentation covering code review standards, onboarding steps, and access instructions for internal tooling, considerably reducing ramp-up time across a cross-functional team of approximately 50 employees.

PROJECTS

Anilog | *JavaScript, React, Redux, Python, Flask, Docker, PostgreSQL, AWS*

[GitHub](#) | [Live Demo](#)

- Full-stack web app for discovering anime where users can search and filter titles by name, genre, year, and season in any combination and save them to a personal watchlist organized into Watched, Watching, and Plan to Watch categories.
- Built a Redux state management layer with custom logic to detect and handle all possible combinations of active filters simultaneously, enabling compound filtering across the full anime catalog.
- Integrated AWS S3 for user avatar uploads and implemented session-based auth using Flask, SQLAlchemy, and Werkzeug password hashing.

Latte Art Classifier | *Python, TensorFlow, Keras, React, Flask, Docker*

[GitHub](#) | [Live Demo](#)

- Full-stack ML app using transfer learning on MobileNetV2 trained on 460 images from a Kaggle latte art dataset to classify four categories (heart, tulip, swan, and rosetta) with 90%+ overall accuracy and 99%+ on heart detection.
- Built a Flask backend that preprocesses uploaded images, runs inference through a 23MB saved Keras model, and returns predictions with per-category confidence scores in under 2 seconds.
- Implemented lazy loading so the model only initializes on first request to reduce cold-start time, containerized the full app with Docker, and deployed to Render.

Viper Lineups | *TypeScript, React, CSS*

[GitHub](#) | [Live Demo](#)

- Built a Valorant lineup reference tool in TypeScript and React for the agent Viper, covering lineups across all current maps with embedded video guides and zoomed reference images for each lineup.
- Designed each lineup page with a map-based navigation bar, an embedded walkthrough video, and two side-by-side reference images for quick and easy referencing during a match, with CSS animations on page load across all views.

EDUCATION

Western Governors University

Salt Lake City, UT

Bachelor of Science in Computer Science

January 2025

App Academy

New York, NY

Full-Stack Coding Bootcamp

March 2021 – September 2021
